A layout plan of the Muldenstein railroad power station, status of 7 November 1954, is attached.

Comment. The Muldenstein power station was dismantled by the Soviets at the end of the war. In 1952 and 1953, the machinery of this installation was purchased back from the USSR. This machinery required thorough overhauling. Information on the reconstruction of the railroad power station which fires brown coal was transmitted previously. It is expected that a section of the installation will be put into operation in 1955. The power station will deliver the power required for the electrification of railroad lines in central Germany.
For legend and layout sketch of the installation, see Annexes 1 and 2.
